

Beer Tokens

Scan. Verify. Drink. Instantly.

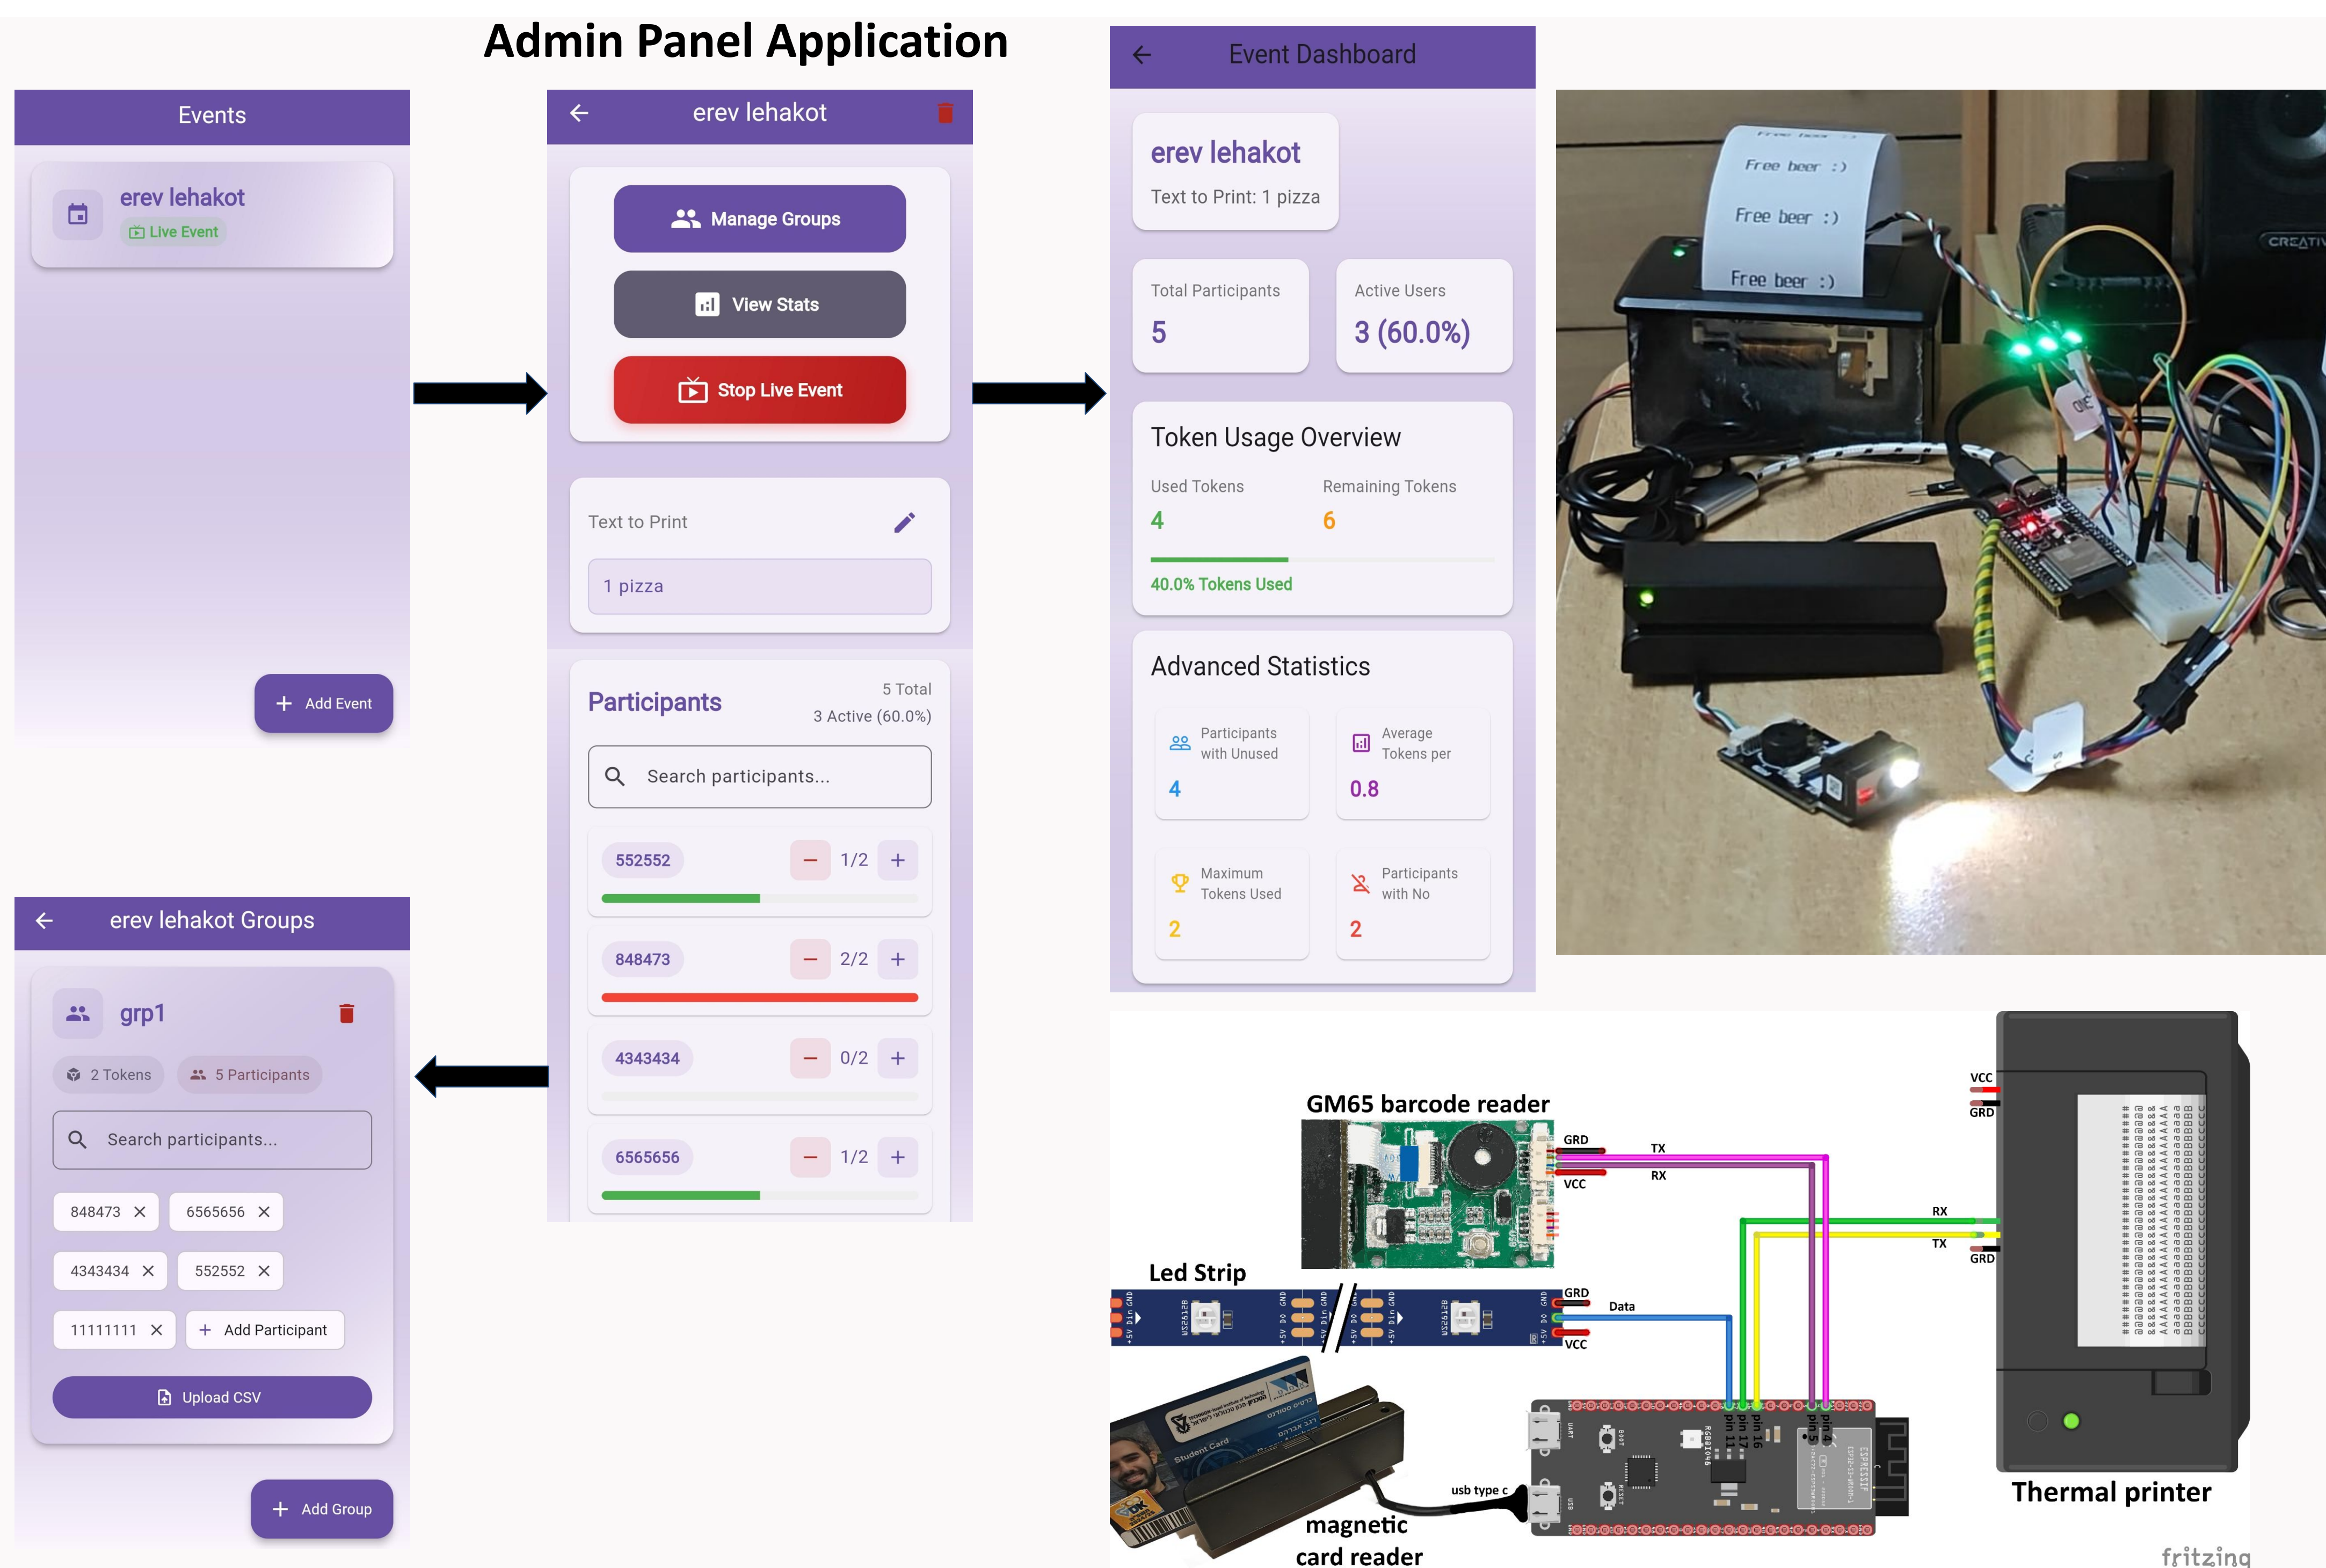

Manually distributing drink vouchers at large student events is slow, error-prone, and hard to monitor.

Our project - A smart system that identifies users and prints drink vouchers using student IDs and a thermal printer.

Main features:

- Scans student ID (magnetic/barcode) for quick user verification
- Checks voucher eligibility in real-time via a Firestore database
- Instantly prints a custom voucher with event-specific details

What makes it unique? Beer Tokens automates checks, handles multiple events, and tracks it all live.

Live Demo Video:

Team member: Afek Nahum, Ido Tausi, Regev Avraham
Instructors: Itay Dabran, Tom Sofer, Dina Alexandrovich
